

# Technical Revolutions are all around you

Right now there are several major technical revolutions going on. One is with telephones and moving from in-house PBX's to Cloud PBX's. Another is home and business automation. It started in the home with Amazon Echo and is expanding into whole-house automation. This same technology is

starting to show up in small businesses, giving some an edge over their competitors. For businesses that have customers visiting their offices and need an environment that is easily changeable, the new technologies allow them to change lighting, airflow and sound quickly and easily either by smartphone or voice.

Printing has been declining for years, but the amount of documents being generated has increased dramatically. Being able to manage and safely share documents is a HUGE issue and there are several companies that have stepped up to accept the challenge. Now, not only can you generate and save a document on your PC, you can access that document from anywhere using any device. PLUS you can share that document securely with anyone you choose in a variety of ways AND all the documents are backed up as part of the service. You may think, "I can do that now". Chances are, for you to achieve this right now, it is both time consuming and expensive. Not with the new systems that are available now!

Everyone knows being connected is important, but you want to be connected in efficient ways. Talking on the phone is not efficient and has no way to be documented unless you record the conversation, but it is personal.
